EDITORIALS | SECTORAL NEWS | FUNDING |
PROGRAM LAUNCH | COLLABORATIONS |
TECHNOLOGY | PROMOTIONS

September 2021

Dear Readers,

We are glad to present to you the First Anniversary edition of the FICCI Eduwrap!

Covid-19 has posed an unprecedented challenge to humanity. In the midst of this crisis, the entire ecosystem of education is being geared up to ensure the safety of students while also ensuring the continuation of the learning process. Conducting examinations for students in the prevailing scenario is a huge challenge that does not need elaboration. There have been ongoing discussions on the significance of assessments and evaluation, its impact on student psychology and the expected outcomes.

This 'new normal', has necessitated deliberations on developing adaptive and innovative models of education and examinations. It is largely felt within educators and other stakeholders that virtual learning has led to skills gaps in the students' learning outcomes, and hence calls for re-strategizing the traditional examination approach. Increased focus on formative assessment techniques, use of technology tools and student feedback are now considered critical in evaluating student learning and preparing them for the new world of work. In the era of Education 4.0, assessments will drive the learning process, curriculum design and delivery, faculty development and flexible learning pathways.

The anniversary edition of this Eduwrap has focused and reflected on the important elements of assessments, evaluation, and validation through the articles by thought leaders in the subsequent pages. It has also focused on what has been accomplished through this newsletter and our vision for the future. Launched in September 2020, the FICCI Eduwrap has had reflections from national and global thought leaders on important themes such as technology, research, financing, skilling, and social responsibility. In the last one year, we have built strong association within our stakeholders network, continuously striving to deliver the relevant and significant sectoral news, and strong insights on the pertinent issues of the higher education sector. As always, we look forward to your views in making FICCI Eduwrap a good read for all!

- FICCI Education Team

Leader Speaks

Why the pandemic-provoked remote proctored assessments may inspire a permanent shift in the education system

Sujatha Kumaraswamy

CEO, MeritTrac Services, a UNext company

While the devastating ripple effects of the pandemic were felt across continents, economies, industries, and practically every aspect of life, the impact has been most acute in the education industry, depriving and displacing over 32 crore students in India alone. Today, educational institutes find themselves in uncharted waters as they continue to navigate the impacts of the pandemic. But this situation has also accelerated innovation and development in the industry and has changed the traditional structure of education as we know it.

In March 2020, schools and colleges were under immense pressure, forcing faculty to abandon the traditional classroom after a national lockdown was imposed. Students, parents, and faculty grew increasingly concerned about the profound implications this could have on the affected batches. This pandemic-induced education divide provoked the industry to conduct numerous experiments in remote learning and examinations to adapt to this global shift. The role of technology was quickly recognised as a critical tool in facilitating learning continuity and making education accessible to students worldwide. Institutes looking to overcome uncertainty and panic began leveraging new-age tech designed to combat these challenges. From classes to guest lectures, webinars and job fairs, fee payments to even exams – technology made everything possible remotely, securely. Finally, the education technology sector had created advanced automated, AI-powered systems that left no room for setbacks or hesitation in implementation.

Several institutes prefer remote assessments over offline examinations – and not just because of the situation of the pandemic. Virtual learning and examinations have proven to collectively empower students and institutions. This virtual alternative is favoured by many over traditional methods due to its flexibility, security, and ease of use. A study conducted by the World Economic Forum suggests that this digital-education shift has boosted student retention skills and makes for a quicker more efficient system. The scale to which the implementation of technology has been adopted over such a short period has provoked thoughts of (and quite strongly indicated) a permanent integration of aspects like online exams, online proctoring and result generation in the traditional system of education.

Though many are opting for remote examinations, shifting assessments digitally is still a challenge for some institutes that have resorted to cancelling or postponing examinations. This has resulted in student and parent distress about the negative consequences this could have on the future of students. Alternative methods of assessments have become a need of the hour to combat this crisis. There is evident health stress weighing on offline examination attempts. With physical contact posing a dire threat, online modes of examination have risen to popularity as a viable solution for our current predicament. It is a long-term solution to equip the industry for not just any future unforeseen crisis but also as a worthwhile option to seamlessly function in today's digital age.

How does it work? Virtually proctored examinations innovated to meet pandemic constraints, allow invigilators or proctors to efficiently monitor students remotely through AI and ML-enabled tools. Designed to authenticate visual identity and biometrics, track body movement and ambient noises, monitor keyboard handwriting, and analyse system usage – advanced proctoring solutions allow for a higher percent of integrity and reliability of tests as well as the elimination of bias. AI-enabled technologies allow proctors to successfully supervise students via a webcam as they would in person. A report with detailed information is produced for the proctor when the exam is completed, allowing them to make a fair judgment on the integrity and credibility of a candidate. These tests produce remarkably fast, accurate, and informative findings.

Remote proctoring allows greater flexibility, eliminates bias, and enables data integrity by ensuring that only authorised personnel has access to it. These tests are foolproof as they prevent malpractice, are easy to use, and improve the overall productivity of the process compared to traditional methods. With the dawn of new advancements in education, like AI and other emerging technologies, for the first time, large-scale exams like NEET and JEE can be administered effortlessly across the country. The University Grants Commission (UGC) too has authorised a set of colleges to offer full-termed online degree programmes in India indicating a definite step towards a technology-powered future for the sector.

Despite the evolution of technology and tools we have access to today, it is surprising to reflect on how a shift of this magnitude was possible in mere months and was not proactively initiated pre-pandemic. Access to basic education has been a global crisis but we have only begun to feel the weight and intensity of it now because of how it has started to affect us at a personal level. This also changes the way we view international education - far from shelling on plane tickets, accommodation, and living expenses. Technology, if implemented correctly, can make online education and online examinations more accessible and affordable to students everywhere – not only to those in small towns and cities but also to those in remote areas who often give up pursuing an education due to various accessibility issues and other limitations. One lesson that has emerged from this situation is a global shift in perspective when it comes to allowing technology to innovate our traditional systems. As the dust settles, we can see that traditional learning and assessment methods are far from obsolete, but proctored assessments have proven to be a lucrative post-pandemic solution that could influence a shift in the traditional education system in the long run.

Examination 4.0 – Examining the Examinations

Prof. Sandeep Sancheti

Provost (Vice Chancellor), Marwadi University

Past President, Association of Indian Universities, New Delhi

India is having one of the world's largest higher education systems, with more than 1,000 Universities and around 50,000 colleges and institutions serving nearly 39 million students. All Indian Universities want to maintain high academic standards to support the curriculum and provide the best educational experience to the students. But they are facing huge challenges in determining the right delivery methods in order to achieve the learning goals and outcomes. Therefore, many universities have adopted different and technology supported models for teaching-learning. Despite all the technical interventions, the most important factor in determining impact of change is the adaption and acceptance of fast evolving technological tools and scenarios. Before the influx of pandemic, the higher education sector was already undergoing some form of digital transformations, but the pandemic has greatly accelerated this process and has also brought a new set of challenges to the entire field of higher education including those for examinations and assessments.

There are several avenues to use technology for teaching-learning processes. Blended and open learning has become common and acceptable at all levels. Schemes and methods like flipped classrooms, smart classrooms, live demonstration, virtual laboratories, animations, artificial and virtual realities, gaming, remote learning through webinars have changed the shape of education delivery significantly in recent past. However, what has not changed is the process of examinations and evaluations. Use of technology for examination is far from visible though the potential seems to be very high. Only in recent times, particularly with the onset of pandemic, we are seeing a small shift in the domain of assessments that too with a limited use of artificial intelligence for proctoring purposes.

Examinations in the context of our country have always been considered very sacrosanct and therefore highly secret. In general, it lacks openness and student centricity. The focus is more on rote learning and reproducing the facts delivered in classes or books. Such a system is generally devoid of assessing aspects like deeper learning as well as the potential to apply the knowledge in a given context. Truly speaking, the emphasis should be on what student knows and how can it be used effectively rather than straight jacketed questions like “define”, “derive”, “draw”, “describe” etc. As an example of my own life while I was completing my doctorate abroad, my guide started challenging me in the initial stage of my work itself by openly naming the best person of my research domain who would be my likely thesis examiner. Though ultimately the named person wasn't my examiner but my guide probably did so to drive me to deliver my best and work at my fullest potential. When I look back, I feel that in absence of such a push I might have been more complacent in my work and research approach. This goes to suggest that keeping everything in a secret mode of operation may not always yield the best and hence the process of examination needs to be much more open, transparent and comprehensive to assess the knowledge as well as potential of the students.

Examinations and evaluations can generally be both summative and formative. The current approach broadly followed by large affiliated University systems is more of summative in nature due to traditions, procedures and controls followed since ages. But it is well established that for better learning as well as evaluation, continuous comprehensive evaluation is must and should be encouraged at all levels. With the inclusion of technology in teaching-learning, as well as with blending of various processes, the methods of assessment and evaluations need to be redefined again in the context of newer technologies, potential to handle pandemic like situations and the requirements of National Education Policy etc.

Generally speaking, “Summative” evaluation will not suffice the need of assessing all levels of learning outcomes, essential for delivering better quality of education as well as for ranking and rating which institution themselves are aspiring for. The modular curriculum and course structures demand assessment at several regular intervals for assessing key outcomes specified for every module. Cognitive skills such as logical thinking, application of knowledge, analysis & synthesis of concepts require evaluation strategies other than the summative or purely pen & paper-based tests. Therefore, innovative assessment strategies are must with increased weightage for continuous and internal evaluations.

In addition to regular assignments, quizzes and tests, some of the new and imaginative “Formative” evaluation strategies can be in the form of creative assignments such as digital stories, drama scripts, e-newsletters & magazines, recorded interview of stakeholders, case studies, cartoon strips, scientific demonstration of working principles etc. These can also be augmented by review discussions on a given topic, summarization or precise in form of small write up, generating info graph or providing active feedback.

A lot is already known about summative evaluation strategies but they can also be improved further by the use of some out of box thinking. These may include a compulsory use of open book examination as it more or less reflects and simulates the real-life situations of any work or profession. Avenues of group examinations can also be used as it will promote sharing of problems and solutions in the peer group and has potential to raise the bar with better average performance of a given set of students. In the context of changing world today we use the freedom of when to work, what to eat, when to sleep, where to work from and which technologies to use etc. As an extension of these arguments, the students can also be given higher degree of choice by offering when to appear in examinations or allowing examination on demand. This will give them higher degree of freedom for getting assessed as and when they are ready for the same and deliver improved performances.

It is well-known that technology and supported tools are finding more and more space in our lives due to many value-added features of automation, repeatability, reliability, reproducibility, upgradability etc. specifically in domains of finance, banking, teaching- learning and services etc. In the same vain, examinations cannot and should not remain obsolete and in isolation from emerging technologies. They too should be benefited immensely by use of appropriate technologies for reducing the burden on teachers by way of repetitive question paper settings, answer script evaluations and invigilation duties. Current set of available technologies using electronic and online methods can help question paper setting by auto generation of papers from question banks, jumbling of question & answers and their patterns controlling the difficulty levels as well as to allow audio & video-based questioning. Aspects of evaluating answer scripts can be improved by electronic scanning and online distribution of answer scripts to examiners which can facilitate better and error free assessments anywhere, anytime. In the same way coding of answer scripts or their allocation or distribution of the e-portfolios can easily be done to overcome the current practices of physical distribution and evaluation method. Administration of examinations and related processes is equally demanding. Once again technology can assist in many routine domains of auto generation of examination notifications, student registrations, invigilator allocation, course outcomes & program outcomes evaluations, result declaration, transcript preparation etc.

The changing phases of examination cannot be completely understood without linking it to the new generation of technologies. Some of these would be a boon to people with different abilities like a person who is unable to read or write can take oral examination and answer the question by speaking rather than writing. Features of text to speech and speech to text can also be a boon for such candidates. In addition to that with the features of natural language processing based multi-lingual translations, all examinations can go global without much of barriers. Use of 3D printing technology can be made for better workable solutions, demonstration and outcomes through modeling & visualization even during examination. Biometric eye tracking using the principles of Artificial Intelligence can be a good substitution for more efficient process of invigilation and its record keeping which will bring more transparency to examination processes without wasting teacher's precious time for such routine chores which in overall terms consume significant portion of their work time during a semester. Use of 5G in cloud technology can also be a boon to augment and facilitate the features of on demand examination and overall scalability of operations.

  <p>Only B-School Declared *Best in India by all the National Apex Business Chambers of the Country and the AICTE, Govt. of India</p>

Scan to hear from the Champions

HuT Labs at Amrita Vishwa Vidyapeetham is an engineering research lab using robotics for social causes. The dedicated research lab, HuT (Humanitarian Technology) Labs focusing on Robotics, Health Care, Human Aided Devices, and Embedded Systems and is headed by *Prof. Rajesh Kannan Megalingam* of Dept. of ECE. With more than 50 national and international achievements and recognitions, it is one of top research labs in India w.r.t technology for humanitarian causes. And the latest feather in our cap is students of HuT bagging the

top prizes at IDC2021 (International Design Contest 2021) Robocon, one of the esteemed robotic competitions, held at TokyoTech University, Tokyo, Japan. The two-week long competition was held virtually due to the pandemic, from 26th July to 7th August 2021.

Out of the 8 countries that participated, our eleven member student team consisting of *Kota Avinash Hegde, P Vijaya Krishna Tejaswi, K S Sankardas, Gaurav Rudravaram, Kotaprolu Sai Smaran, Devisetty Vijay Kumar, A Sai Deepika, Kusumanchi Surya Shanmukh,*

Aditya Ashvin, Koushik Reddy P and Pochareddy Nishith Reddy from HuT Labs, ECE, Amritapuri Campus made it to the finals, competing with 13 other teams. It is to note that students from HuT Labs have previously won first prizes consecutively in IDC2018 (TokyoTech, Japan) and IDC2019 (MIT, USA). It is an invitation-only based competition, extended to only one top university from 15 countries including Japan, Singapore, China, South Korea, France, Brazil, Mexico, India etc.

When the country celebrated India's first Athlete Gold Medal at Olympics by *Neeraj Chopra*, Amrita students parallelly made India proud again at Tokyo by winning: First Prize (by *Sankars Das*), Second Prize (by *Sai Smaran*) and Best Design Award (by *Gaurav Rudravaram*) at the esteemed IDC2021 - Robocon.

- Knowledge and Learning Week @Dubai Expo, December 12-23, 2021**

The Expo 2020 will be the world's greatest show of human brilliance and achievement. Expo will showcase innovation, inspiration, and the most brilliant talent from 192 countries in one spectacular futuristic destination. A global celebration, it will empower visitors to connect, collaborate, create and be inspired. By allowing visitors to explore the promise and potential of its subthemes – Opportunity, Mobility and Sustainability – it will deliver lasting, positive impact for people and communities across the world.

The entire programme will include industry engagements, conferences, seminars, B2Gs, B2Bs, CEOs Meetings, keynote sessions, workshops etc at the India pavilion. The Indian contingent will also visit and participate in the events/ sessions in the different country pavilions. The program also includes visits to organisations in the UAE (outside the Dubai Expo site).

For participation, reach out to us at: nidhi.jain@ficci.com
