- **Amit Chaturvedi**, Management Adviser, Hero Corporate Service Ltd
- **Sandeep Batra**, CFO, Crompton Greaves
- **Sukumar**, Sr Advisor, XINFIN

Sponsor

“The government will keep exploring and working on the Blockchain Technology”

Arun Jaitley, Finance Minister

Lot of people still use Bitcoin and Blockchain as interchangeable words. Lack of awareness, global regulatory caution and classification of cryptocurrencies as not legal tender has kept institutions away from exploring more about the underlying Blockchain technology. At the same time the government is laying an emphasis on Blockchain as technology; the institutions have started exploring how this technology can benefit them.

Blockchain comes with inherent characteristics of immutability, real time peer to peer settlement, shared ledger and cryptographically secured transactions. It holds the potential to revolutionize almost every industry using peer to peer exchange of digital assets without an intermediary thereby replacing traditional third-party verification. A wide variety of applications are being built in banking, finance, trade, supply chain, insurance, travel, government services, etc. by start-ups and established institutions.

Join us to learn and demystify the Blockchain Technology and how it can transform Businesses

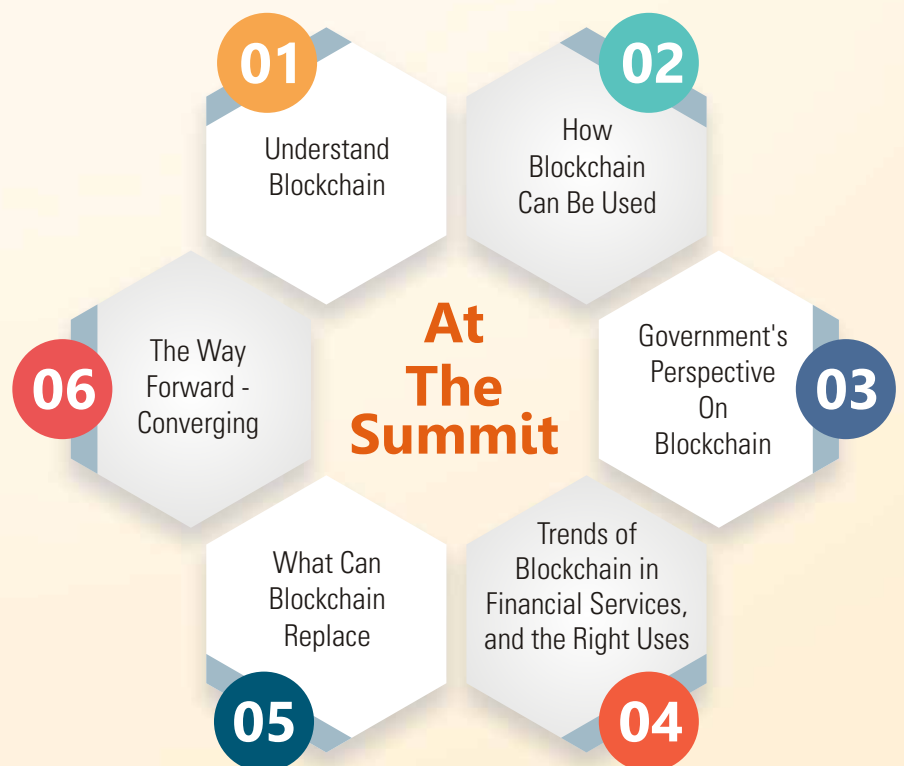

Demystifying Blockchain

Regulatory and Industry Perspective

Experience from Blockchain Implementation

Converging on Way Forward

At FICCI, we believe Blockchain is an important milestone after internet. The technology is nascent and finding applications in wide range of areas both enabling and disrupting the legacy systems. FICCI is inviting eminent government, regulatory and CXO dignitaries to be part of the **Blockchain Innovation Summit** to unleash the power of the Blockchain.
